ADVANCED STONE CARE

MARBLE REFINISHER

- ✓ *Marble Refinisher* is a ready-to-use product for removing etching, watermarks, and dullness while restoring a mirror-like polish on marble, polished limestone, onyx, and terrazzo.
- ✓ Designed for use manually or with standard speed floor machines (up to 350 rpm) or automatic scrubbing equipment.
- ✓ Restores dull floors to a glossy like-new condition.
- ✓ *Marble Refinisher* is an effective maintenance alternative to more labor intensive polishing techniques such as recrystallization or diamond polishing.
- ✓ Can be used as the final polishing step after diamond grinding to restore a mirror luster on seriously damaged surfaces.
- ✓ Easy-to-use.
- ✓ Cost effective stone maintenance and minor restoration system.

PRODUCT DESCRIPTION

Glaze `N Seal's Marble Refinisher is a specially formulated mixture of polishing chemicals and micro-abrasive powders for use in polishing of stone surfaces.

INSTRUCTIONS

The stone surface must be clean and free of any coatings such as wax or acrylic finishes and grease. Clean the surface to be polished to remove any soiling or abrasive sand or dirt. *Stone Stripper* is recommended for removing wax, finishes and grease.

Shake well before using. Safety glasses recommended. Apply *Marble Refinisher* directly from bottle in a sweeping motion over area to be polished. Use approx. 1/2-1 ounce for a 15 square foot area of stone. Sprinkle a small amount of water (1/2 ounce) over the same area. Use a white or a hog's hair polishing pad on a standard polishing machine (150 to 350 rpm). Begin polishing by moving the machine across the surface of the stone. The polishing time will vary with the particular type of stone in addition to the condition of the stone and the type of polisher used. Generally, the time spent per square foot should range from 5 to 20 seconds. When finished polishing, clean with Stone Cleaner. Remove residue with a mop or wet-vacuum. Buff the polished area with a clean white polishing pad. For manual use follow instructions above using a hand held white synthetic pad.

Some stone surfaces may require additional applications and polishing with Marble Refinisher.

APPROXIMATE COVERAGE

Pint covers 200 to 400 square feet.
